this book contains the proceedings of the sixth national conference of the italian systems society the title towards a post bertalanffy systemics aims to underline the need for systemics and systems science to generalize theoretically concepts related to complexity the great enemy of bertalanffy systemics hopefully this goal should be achieved by working in an inter disciplinary and trans disciplinary fashion using systemic concepts arising from various disciplines and from the original or bertalanffy systemics as well the interdisciplinary nature of the original systemics and its power of generalization were given overall by the fact that the problems and solutions of one discipline become problems and solutions for another today the modeling and interpretation of multidisciplinary approaches and representations makes easier to recognize these interconnections the context however has changed dramatically of course the challenge is still to find theoretical generalizations and applications even where we have a lot of specificities but we know very little on how to combine them we cannot however simply replace the old with the new but we must introduce strategies to recognize represent model and act on new levels combining multiple representations functions and emergence in many disciplines this has been already done and inevitably well since targets and projects are well specified and oriented the challenge is to do it for systemics with the vocations of cultural and theoretical generalization examples of new issues introduced by such theoretical disciplinary improvements

dealt with by many disciplines include the study of mesoscopic or middle way level of multiple and dynamic coherence of equivalence non equivalence of fractality of networks of non causality of non invasiveness of non prescribability of non separability of quasi properties of symmetry properties of topological dynamics as well as of quantum theories and concepts the conference was devoted to identifying discussing and understanding possible interrelationships of theoretical disciplinary improvements recognized as having prospective fundamental roles for a new post bertalanffy systemics the latter should be able to deal with problems related to complexity in a generalized way in this context the inter disciplinarity should consists for instance in a disciplinary reformulation of problems as from algebraic to geometrical from military to political from biological to chemical while the trans disciplinarity should be related to the study of such reformulations and their properties the italian systems society airs was founded in the 1996 the airs is a network of academicians scientists researchers and professionals involved in systemics a partial list of disciplines represented is architecture biology economics education engineering mathematics neurosciences medicine music philosophy psychology physics previous conferences had as open lecturers professors arecchi haken klir and kauffman the proceedings have been published as 1 minati g ed 1998 proceedings of the first italian conference on systemics apogeo scientifica milan italy 2 minati g and pessa e eds 2002 emergence in complex cognitive social and biological systems kluwer new york 3 minati g pessa e and abram m eds 2006 systemics of emergence research and applications springer new york 4 minati g abram m and pessa e eds 2009 processes of emergence of systems and systemic properties towards a general theory of emergence world scientific singapore 5 minati g abram m and pessa e eds 2012 methods models simulations and approaches towards a general theory of change world scientific singapore
